9、注意事项/ Cautions :

使用/ Application :

1. LED 是电流驱动元件, 电压的细微变化会产生较大的电流波动, 导致元件遭到破坏。客户应使用电阻串联作限流保护。

A LED is a current-operated device. The slight shift of voltage will cause big change of current, which will damage LEDs. Customer should use resistors in series for the Over-Current-Proof

2. 为了确保多颗 LED 并联使用时光色一致, 建议每条支路使用单独电阻, 如下图模式 A 所示;

如采用下图模式 B 所示电路, LED 光色可能因每一颗 LED 不同的伏安特性而造成光色差异。

In order to ensure intensity uniformity on multiple LEDs connected in parallel in an application, it is recommended to use individual resistor separately, as shown in Circuit A below. The brightness of each LED shown in Circuit B might appear difference due to the differences in the I-V characteristics of those LEDs.

电路模式/ Circuit model A

电路模式/ Circuit model B

3. 过高的环境温度会影响 LED 的亮度以及其他性能, 所以为能使 LED 有较好的性能表现应远离热源

High temperature may reduce LEDs' intensity and other performances, so keeping it away from heat source to get good performance is necessary.

存储/ Storage :

1. 未打开原始包装的情况下, 建议储存的环境为: 温度: $5^{\circ}\text{C}\sim 30^{\circ}\text{C}$; 湿度: 85%RH 以下。当库存超过三个月, 使用前应做除湿处理, 条件 $60^{\circ}\text{C}/24$ 小时。

Before opening original package, it is recommended to store them in the following environment:

Temperature: $5^{\circ}\text{C}\sim 30^{\circ}\text{C}$, Humidity: 85%RH max. When the inventory over 3 months, Should be done before treatment using dehumidification, Temperature: $60^{\circ}\text{C}/24$ hours.

2. 打开原始包装后, 建议储存环境为: 温度 $5\sim 30^{\circ}\text{C}$; 湿度 60% 以下。

After opening original package, the storage ambient for the LEDs should be in $5\sim 30^{\circ}\text{C}$ temperature and 60% or less relative humidity

3. LED 是湿度敏感元件, 为避免元件吸湿, 建议打开包装后, 将其储存在有干燥剂的密闭容器内。

In order to avoid moisture absorption, it is recommended that the LEDs that out of the original package should be stored in a sealed container with appropriate desiccant.

ESD 静电防护/ ESD (Electrostatic Discharge)-Protection

LED（特别是 InGaN 结构的蓝色、翠绿色、紫色、白色、粉红色 LED）是静电敏感元件，静电或者电流过载会破坏 LED 结构。LED 受到静电伤害或电流过载可能会导致性能异常，比如漏电流过大, VF 变低, 或者无法点亮等等。所以请注意以下事项：

A LED (especially the Blue、White and Green product) is an ESD sensitive component, and static electricity or power surge will damage the LED. ESD-damaged LEDs will exhibit abnormal characteristics such as high reverse leakage current, low forward voltage, or “no light-up” at low currents, etc. Some advice as below should be noticed:

1. 接触 LED 时应佩戴防静电腕带或者防静电手套。

A conductive wrist strap or anti-electrostatic glove should be worn when handling these LEDs

2. 所有的机器设备、工制具、工作桌、料架等等，应该做适当的接地保护（接地阻抗值 10Ω 以内）。

All devices, equipment, machinery, work tables and storage racks, etc. must be properly grounded (Grounding impedance value within 10Ω)

3. 储存或搬运 LED 应使用防静电料袋、防静电盒以及防静电周转箱，严禁使用普通塑料制品。

Use anti-static package or boxes to carry and storage LEDs. And ordinary plastic package or boxes is forbidden to use.

4. 建议在作业过程中，使用离子风扇来压制静电的产生。

Use ionizer to neutralize the static charge during handling or operating.

5. 距离 LED 元件 1 英尺距离的环境范围内静电场电压小于 100V。

All surfaces and objects within 1 ft close to LEDs measure less than 100V.

清洗/ Cleaning

建议使用异丙醇等醇类溶液清洗 LED，严禁使用腐蚀性溶液清洗。

Use alcohol-based cleaning solvents such as IPA (isopropyl alcohol) to clean LEDs if necessary

焊接/Soldering

1. 波峰焊焊接次数不得超过两次。

Wave soldering should not be done more than 2 times.

2. 只建议在修理和重工的情况下使用手工焊接；最高焊接温度不应超过 300 度，且须在 3 秒内完成。烙铁最大功率应不超过 30W。

Manual soldering is only suggested on repair and rework. The maximum soldering temperature should not exceed 300°C within 3 sec. And the maximum capacity of soldering iron is 30W in power.

3. 焊接过程中, 严禁在高温情况下碰触胶体。

During the soldering process, do not touch the lens at high temperature.

4. 焊接后，禁止对胶体施加外力，禁止弯折 PCB，避免元件受到撞击。

After soldering, any mechanical force on the lens or any excessive vibration shall not be accepted to apply, also the circuit board shall not be bent as well.

其他/ Others

1. 本规格所描述的 LED 定义应用在普通的电子设备范围（例如办公设备、通讯设备等等）。如果有更为严苛的信赖度要求，特别是当元件失效或故障时可能会直接危害到生命和健康时（如航天、运输、交通、医疗器械、安全保护等等），请事先知会敝司业务人员。

The LEDs described here are intended to be used for ordinary electronic equipment (such as office equipment, communication equipment and household applications). Consult HQG's Sales in advance for the applications in which exceptional reliability is required, particularly when the failure or malfunction of the LEDs may directly jeopardize life or health. (such as in aviation, transportation, traffic control equipment, medical and life support systems and safety devices).

2. 高亮度 LED 产品点亮时可能会对人眼造成伤害，应避免从正上方直视。

The light output from the high luminous intensity LEDs may cause injury to human eyes when viewed directly.

3. 出于持续改善的目的，产品外观和参数规格可能会在没有预先通知的情况下作改良性变化。

The appearance and specifications of the product may be modified for improvement without prior notice.
